The eight

Printed and screen colour will never match a troweled sample. Order a physical sample box before signing off a tone — every panel is made by the applicator who will do your job.

Bone
SC-01
Warm off-white. The default for compact rooms.

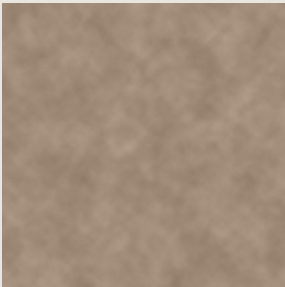

Chalk
SC-07
Cool pale grey with a soft trowel cloud.

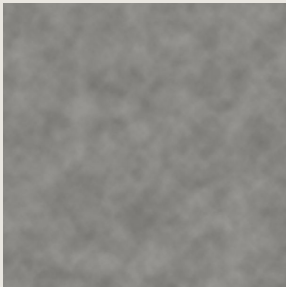

Sand
SC-14
Warm beige. Reads golden under evening light.

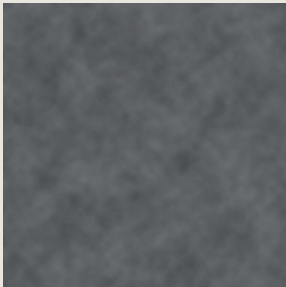

Dust
SC-22
Mid neutral grey. The most specified tone.

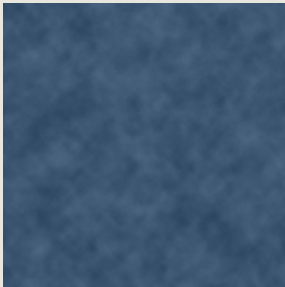

Clay
SC-31
Earth red-brown with visible hand movement.

Ash
SC-40
Deep neutral grey, holds detail in low light.

Graphite
SC-52
Near-black with a fine mineral sparkle.

Pigment
SC-60
Mineral blue. Feature surfaces only.

Before you choose

Light changes everything. A tone specified at 11:00 in an empty room will not be the tone you live with at 19:00 with the lamps on. Look at every sample in the actual room, at three different times of day, against the actual joinery.

Sheen changes the tone too. The same pigment reads two shades darker in polished than in matte, because polished reflects the ceiling back at you.

Large areas read lighter than the sample. If you are covering more than 40 sq m, expect the finished floor to sit roughly one step paler than the 200 mm panel in your hand.

Hand-troweled means variation. Cloud movement, trowel marks and tonal drift are the material, not a defect. If you want dead-flat uniformity, we will tell you to use something else.

SAMPLE PANEL	200 × 200 mm, made in the finish and sheen you are specifying
SAMPLE BOX	Eight core tones, free, delivered anywhere in India
CUSTOM MATCH	Any RAL, NCS or physical reference, 10 working days
MINIMUM ORDER	None for samples
